Within the past two days, somehow, the Kernel32 system file has been sent to my desktop. I haven't even looked through my system files, or touched anything that would have sent the system files to my desktop.

Also, for some reason, each time I boot up my computer I get a start-up message that says 'Tss' (I'm assuming this is some other sort of system file) has performed an illegal operation and will be shut down'.

I have no idea what either of these files mean. I'm running a Windows98 system, and any help as to how to fix these problems would be helpful.

Thank you!
