Sounds like some file system corruption or a failed disk. Try running the disk manufacturer's utilities from their web site followed by chkdsk (assuming it checks out OK)

You can also run chkdsk from the RC.

chkdsk /r
from the recovery console command line. (/r implies /f and /p)

To start the Recovery Console, start the computer from the Windows XP CD-Rom. At the "Welcome to Setup" screen. Press F10 or R to repair a Windows XP installation, and then press C to use the Recovery Console. The Recovery Console then prompts you for the administrator password. If you do not have the correct password, Recovery Console does not allow access to the computer. If an incorrect password is entered three times, the Recovery Console quits and restarts the computer. Note If the registry is corrupted or missing or no valid installations are found, the Recovery Console starts in the root of the startup volume without requiring a password. You cannot access any folders, but you can carry out commands such as chkdsk, fixboot, and fixmbr for limited disk repairs. Once the password has been validated, you have full access to the Recovery Console, but limited access to the hard disk. You can only access the following folders on your computer: drive root, %systemroot% or %windir%

Be sure to have full backups in place before hand.

| Hello everyone !

Re: Lost folder names in MiniaturFolder view

|
| I just lost all my folder names in some of my folders (but not all of my folders).

| I have the folder and the picture for each folder, but not any name underneath the folder.

| This also apply for files that are located in the same folders.

|
| Sure there is a easy way to correct this, but I am not able to find it..

|
| Anyone?

|
