Hi Mark,

Are you sure of your response ?

As I read the post, where it says,

> *On my XP Box with SP1 if I remove the PC from the domain,*

> *these policies remain in force and are locked on the local station.*

the poster is indicating that the policies are still grayed out and disallowing local policy management of their values.

As I understood it, those values that are tattooed have those settings persisting, but the local policy should allow them to be changed, and the cached true policies from the domain should no longer be in force, and be changable. Certainly the engine should no longer be acting as if they are being enforced from AD and disabling their adjustment with the local UI .

TIA,

--
