We run a default domain group policy and a domain controller group policy on our small student network. Just recently when I try to edit either of the above policys the console screen takes forever (3 to 8 minutes) to refresh before I'm allowed to edit any of the policy settings. It does allow me to make the changes and they seem to be recorded in the policy but unless I'm patient and wait for the screen refresh to occur I'm basically locked out of this console. I'm not aware of any chnges made to the policy before this problem arose and I haven't yet found anyone on the web with a similar problem. Prior to this problem we had instant screen refreshs when working on group policies. Anyone have any ideas.

Al
