hmmm

first time I have seen this one.

Turn up winlogon logging

Location of the log file – %windir%\security\logs

Registry Location –

HKLM\Software\Microsoft\WindowsNT\CurrentVersion\WinLogon\GPExtensions\  
{827D319E-6EAC-11D2-A4EA-00C04F79F83A}

Registry Setting – Add the REG\_DWORD value "ExtensionDebugLevel"  
and set it to 0x2

Execute a gpupdate /force, verify you get the 1202 event, and post the log  
file to this thread.
