All settings are fine

I do find that after using all the MS KB articles I can find on this subject, and clearly there are issues with Server2003 SP1 and XP, SP2 and GP, after a gresult the user section does NOT list the GPO on the workstation that is having the problem; if I go to a workstation that works with GPO's, the user section does list the proper GPOs for this user.

Something is prohibiting the clearing and updating of the GPO's on the workstation side, not the server side.

dave

Those tools will do a variety of tests for network connectivity, dns, dc discovery, secure channel, replication, etc. --- Steve
