Doubtful that this is your problem. If the client side extension was not actually registered you wouldn't get any activity at all for software installation. I suspect the problem is more in either how the package is referenced or permissioned or in the package itself. One thing I usually suggest when someone is having these kinds of problems is to first enable logging on the software installation CSE. This is described at <http://support.microsoft.com/kb/246509/EN-US/> or I have a GP logging ADM file on my site at www.gpoguy.com/tools.htm that lets you enable this through policy.
