Hi..

it's the bat file what you have typed wrong.. it should be

```
net use x: \\servername\apps /user:username password
```

/Jonas

Hi there,

I am try to run a startup script (.bat file) to coonect to a remote server upon startiiing up the machine before login on Windows 2003 sp1 box. this is my .bat file

```
net use x: \\servername\apps password /user:username
```

I placed this script in the
c:\windows\system32\Grouppolicy\machine\scripts\startup folder and enable it
in GPedit.msc .

It never work for be upon restart ? any ideas what's going on here
