Hi all,

I would like to know how can I reset the group policy in an AD environment back to its default config?

Currently, the GPO doesn't take effect on the config I applied.

Example, the password complexity is set as "Not Defined" but whenever I tried to change my password it will prompt me the new password does not meet the requirement.

I have other issues as well, so I need to reset all back to default policy.

Thanks in advance.

.
