Hi Mike,

By default, files with the following extensions are excluded from synchronization :

- ..db?
- ..ldb
- ..mdb
- ..mde
- ..mdw
- ..pst
- ..slm

Please check following article:

Error Message: Files of This Type Cannot Be Made Available Offline

<http://support.microsoft.com/?id=252509>

Hope this helps.

Best regards,

Vincent Xu

We are using folder redirection for the my documents, and application data folders.

When users log off they are getting errors about some files not being able to be synced. They are all database files. Is there a way to either force these files to sync, or even better just disable this message. I would prefer to do this with all the machines across the

domain.

Thanks

Mike Waite
