Hi ,

They should be the same. However, Gpresult shows the corresponding registry keys, not the policies.

Found some information,check following article:

<http://support.microsoft.com/default.aspx?scid=kb:en-us:829072>

Hope this helps.

Best regards,

Vincent Xu

Hi Vincent,

Thanks for the reply.

I notice that the value 'DisableHyperlinkWarning' is not present in the

txt

file after running Gpresult /z >c:\result.txt. Which is interesting,

because

if I open MMC, and add the RSoP snap-in, and generate the RSoP data, it shows that the policy IS being applied, it's enabled, and shows the GPO

name

it's come from. I thought that the information between Gpresult & RSoP

would

be the same?

Hi,

It appears that the policy is not applied to client successfully.

Re: Bug with Office GP – Disable Hyperlink Warning?

As you said , the corresponding registry key of the policy is:  
HKCU\Software\Policies\Microsoft\Office\11.0\Common

You can run : Gpresult /z >c:\result.txt

Check the result.txt if the  
HKCU\Software\Policies\Microsoft\Office\11.0\Common is  
listed in.

thanks.

Hi,

Not sure if this is right or  
not, but I think I've found a  
bug in the

group

policy template for Office  
2003.

If you go to 'User Config' >  
'Admin Templates' >  
'Microsoft Office

2003'

'Security Settings' then open  
the 'Disable Hyperlink  
Warning' policy

and

Re: Bug with Office GP – Disable Hyperlink Warning?

Re: Bug with Office GP – Disable Hyperlink Warning?

try

to set it to enable, without also checking the 'Check to override

hyperlink

warning' it default back to 'Disabled' which is a little annoying if

you

don't realise that's happened, and then spend ages trying to figure out

why

a workstation isn't picking up the new settings. It seems a little

pointless

to have to tick 2 options to perform a single function. In other

policies,

the sub section of the properties dialogue is just for additional options.

Also even after enabling this policy it doesn't seem that Office 2003

even

picks up the value. I tested this, by forcing a GPupdate, logged off

then

on

Re: Bug with Office GP – Disable Hyperlink Warning?

again, opened an excel spreadsheet containing a hyperlink, and still

got

the

warning message. Looking at <http://support.microsoft.com/kb/829072>

there

are

2 locations this value can be set, "HKCU\Software\Policies\Microsoft\Office\11.0\Common" which is where

the

GP

sets the value, but it can also be entered under "HKCU\Software\Microsoft\Office\11.0\Common" I checked that there

wasn't

a

conflicting value under here that might take precedence over the policy setting, but there wasn't. I tried another GP update, and rebooted,

then

tested with excel again, but still got the warning. Only after creating

the

entry manually in "HKCU\Software\Microsoft\Office\11.0\Common"

Re: Bug with Office GP – Disable Hyperlink Warning?

and

setting

"DisableHyperlinkWarning"  
to 1, could I get the warning  
message to

disable.

It seems that Office, or at  
least excel, (haven't tested  
with word

yet),

doesn't take notice of this  
settings if its defined in a  
policy.

Has anyone else found this  
problem, or is it just our  
setup?

Many thanks

Ben
