| Hello,

| Thank you for using newsgroup!

| From your post, it looks like there is a handle on
| pushprinterconnections.exe. You may exclude the file from antivirus
| scanning and killed handle on it. Alternatively we have a copy of
| pushprinterconnections.exe in netlogon share and change the policy path
| in
| startup scripts in machine policy. Run gpupdate /force on client system
| and
| Reboot the client system to see if it still occurs.

| If the problem persists, please make sure if the domain admins have been
| listed in local administrators group. What is the exact error message?

| Thanks & Regards,

| Ken Zhao

||

|| I am trying to use GP to deploy printers. Per the MS article for such,
I

|| need to run pushprinterconnections.exe as a startup script. I am at
the

DC

|| running 2003 R2, SP2 and when I try to copy that file to the
Scripts\Startup

|| folder for any OU, I get access denied errors even though the domain
admin is

|| performing the action. I checked the permissions and of course domain
admins

|| have full control and there are no denials. I tried copying a test
batch

file

|| and had no trouble. I also tried copying pushprinterconnections.exe to
to

|| the Scripts\Shutdown folder and had no trouble.

||

|| Can anyone explain this? Maybe I can run it as a shutdown script
instead,

|| but I shouldn't have to.

||

|| Thanks.

||
