All emails are included below in reverse chronological sequence. I did the ipconfig comparisons that you outlined below. It said there was no difference between the before and after files. What does that mean?

Your response was sequenced below Henri's as if it were a response to my first post. Did you read my second post about the specific sequence of events and the problem having to do with some sort of "dialog" or "script" or something else? Last but not least which forum should I post to and how should I label it so that I don't get the response that this belongs in the IE forum? BTW, I'm running Win XP Pro SP1 with all current maintenance applied.

thanks, violet
