There are lots of different runtime errors. What is the exact error message?
If there is a Details button click that and give us the first two lines.

Go to Tools | Internet Options | Advanced.
Check the box to Disable script debugging.
Uncheck the box to Display a notification about every script error.

You might want to refresh your scripting engine:

Sometimes there's a corrupt file in the cache and one must go to Tools | Internet Options and click Delete Files.
