It is a secure server (https), and the initial site lods.
There, I type in username, and password. The URL after
that does not display a username/password, however.

It is possible that the URL initially does have that
info, and then it transitions to the URL that I see. Do
you think that is the cause of the problem? If so, then
there's nothing I can do about it - I have to use the
site, and unless Verio (the site provider) feels like
fixing it, there is little I can do.

Thanks for any info you can provide.
