Just noticed for the first time a most odd thing. As many of you may know, there's been a DDoS "attack" on several Anti-Spyware forums and certain programs Update managers. CWS shredder is one of the programs having difficulties being updated due to this.

Of late, when trying to update CWS shredder it has been failing, and / or not responding. So, today I had to Ctrl-Alt-Del CWS shredder. This isn't the first time I've had need to do this in the last day or so. OK, here is the odd part:

The task manager had CWS shredder listed as CSWhredder. Has anyone else noticed this, or is this just my machine?
