Internet Explorer keeps closing on me. I can run it for anywhere from 30 seconds to 30 minutes and then I get a dialouge box that says "Internet Explorer has encountered a problem and needs to close" so I send the error reports. I talked to someone from E-Machines technical support and they had me erase the cookies, then set my homepage as a blank one to fix the problem. Now I can't reset my homepage. I also have problems with Internet Explorer not responding occasionally. I have my computer set to automatically download and install updates, and I have ran my antivirus (Symantec) to see if it is a virus, and it says there are no viruses. I also have anti spyware programs to keep spyware out, so I wouldn't think that would be the problem. Can anyone help me?
