Open Windows Explorer.

Go to Tools | Folder Options | File Types.

Scroll down to URL:HyperText Transfer Protocol and select it.

Click Edit or Advanced, depending on your Windows version.

Select 'open'.

Click Edit.

"Application used to perform this action" should read:

"C:\PROGRAM FILES\INTERNET EXPLORER\iexplore.exe" –nohome

(Check the path to iexplore.exe to make sure that is correct and use the double quotes.)

DDE should be checked and in the boxes below it you should have:

#1:

"%1" ,,-1,0,,,

#2

IExplore

#3 (blank)

microsoft.public.windows.inetexplorer.ie6.browser: Re: unresponsive links

#4

WWW_OpenURL

URL:HyperText Transfer Protocol with Privacy should be the same.

Sometimes it is necessary to uncheck Use DDE.

If that doesn't fix it, go to Start | Run and type

regsvr32 urlmon.dll
