All I have in the registry there is a folder called ".spop". Backed it up and removed it from the registry still to ho avail, can't click on hyperlinks as it tells me "Error 403" and i can't "save file as" as i get a message box saying "Internet Explorer was not able to open this internet site. The requested site is either unavailable or cannot be found. Please try again later"

I have tried using the restore CD that came with my pc. It worked I could download files for about 30 mins but then windows did an update and it don't work anymore. I can't seem to uninstall the updates so needless to say i an a little annoyed.

Can anyone give any further help.

Thanks Roy.
