Diane,

Most of the time this is just errors on the web site not your end.
However some ad-blocking apps will cause this (script error) when the ad or banner fails to display.

Internet Options | Advanced

Select: "Disable script debugging"

Uncheck: "Display a notification about every script error", click Apply\Ok

Verify these Registry entries exist and are correct:

[HKEY_CURRENT_USER\Software\Microsoft\Internet Explorer\Main]

"Disable Script Debugger"="yes"

"Error Dlg Details Pane Open"="yes"

"Error Dlg Displayed On Every Error"="no"

"NoJITSetup"=dword:00000000

"NoWebJITSetup"=dword:00000001

Note: always Export before editing

[or]

Download the latest version of Windows Script 5.6 for XP\2K

<http://www.microsoft.com/downloads/details.aspx?FamilyID=c717d943-7e4b-4622-86eb-95a22b832caa&DisplayL>

Try installing that and see if it helps with your problem.

--

See: "General troubleshooting for scripting errors"

<http://v4.windowsupdate.microsoft.com/troubleshoot/>

An Error Has Occurred in the Script on This Page
