Some issues with your type of errors.

How to Configure Internet Explorer to Work with AOL as Your ISP

All of a sudden I can't launch I.E. 6 to connect to the internet UNLESS I have first connected with AOL. If AOL isn't launched and I try to do IE6 I get this:

C:\windows\system\shdoclc.dll\dnserror.htm If you have AOL or had it then try this fix.

<http://support.microsoft.com/?kbid=165474> (i. e. 4, 5. W95/98 5/12/2003)

From: "Michel Desrochers" in a previous post.

I have a workstation running Win98. The IP address is correct. Netstat results are fine. Tracert to DSB server is fine. When I type in any url I receive "The Page Cannot be Displayed". The error at the top reads:

"RES://C:/windows/system/shdoclc.dll\dnserror.htm#<http://www.google.com>

Solution: I finally find that my problem come from a bad deinstallation of new domain (a spyware come with Kazaa). I downloaded the uninstall program that came from their web site and then I can access to the internet back.

It was New Net a parasite. http://www.new.net/support/uninstall4_80.exe.

Yours may be different.

KaZaa and all it's parasites

New dot Net, NewNet

IE 6. Rule out parasites like Kazaa and others.

Try this: Tools > Internet Options > Advanced > Browsing
Uncheck the Enable 3rd party browser extensions

If this clears your problem then find out who the culprit(s) is/are with these tools.

Let AD-Aware Scan your system for advertising Spyware

<http://www.lavasoftusa.com>

and:

microsoft.public.windows.inetexplorer.ie6.browser: Re: cannot connect to server or DNS error

SpyBot-S&D

<http://security.kolla.de/>

p.s Reset the 3rd party browser setting.

Dealing with Unwanted Spyware, Parasites, Toolbars and Search Engines
