Not sure if this will help you or not, but
Try IEFix: <http://www.mvps.org/sramesh2k/IEFIX.htm>

Or, try the manual procedure below:

First, try reinstalling from the INF files.
Click Start/Run/Type "rundll32.exe setupapi,InstallHinfSection
DefaultInstall 132 %windir%\inf\ie.inf"
This fixes most problems. If not, see below:

Reinstall or Repair Internet Explorer and Outlook Express in Windows XP:
<http://support.microsoft.com/?kbid=318378>

[As stated, set the registry key "IsInstalled" to 0. If not, you may be
unable to reinstall IE/OE]

Unable to Install Internet Explorer 6 on Windows XP:
<http://support.microsoft.com/?kbid=304872>

General Advisory: Double-check if you have changed the correct registry key.
Because, there are several similar keys in that location. Visit MVP Kelly
Theriot's page and download the fix named "Enable reinstallation of internet
explorer". This fix changes the IsInstalled flag automatically.

Restart Windows and start Internet Explorer setup again.

Hope this helps.

Martin
