Thanks for the responses to this one so far. Unfortunately, none of the fixes work in my case. In response to Black Beard, I've tried this without passive and with passive ftp enabled. I've tried every combination in IE 6.0. In fact, no matter what combination I use, anytime I attempt to access ftp via IE, IE locks up and I have to close it via the Task Manager. I still cannot access ftp via third party software and also via cmd. Here's what I get when I attempt it via cmd:

```
C:\>ftp
ftp> open ftp.epson.com
Connected to ftp.epson.com.
Connection closed by remote host.
ftp>
```

In between Connected... and Connection closed..., I cannot do anything, the cursor blinks, but I cannot type anything.

Thanks again.

----- H Leboeuf wrote: -----

It may be a HOSTS file problem.
Look for a file named HOSTS (no extension, could be hidden) rename it
OLDHOSTS.

Or:

Try this: Tools > Internet Options > Advanced > Browsing
Uncheck the Enable 3rd party browser extensions

If this clears your problem then find out who the culprit(s) is/are with
these tools.

Let AD-Aware Scan your system for advertising Spyware
<http://www.lavasoftusa.com>

and:

SpyBot-S&D

<http://security.kolla.de/>

p.s Reset the 3rd party browser setting.

More: This may be caused by a third-party program (adware, spyware, parasite).

Get AdAware and SpyBot and run them both. Keep them up to date.

Dealing with Unwanted Spyware, Parasites, Toolbars and Search Engines

I cannot connect through IE 6.0--passive ftp is not enable, folder view is; I cannot connect using Netscape and Mozilla; I cannot connect to any ftp site using cmd--I type "open" and then the ftp site; I cannot connect to ftp using any third party ftp software. I tried every possible scenario: Windows XP firewall on and off, Norton firewall on and off, using my Win 98SE computer connect via home network. I used to be able to access ftp via IE, but no longer. Any ideas? Thanks.*
