Hi Ricky :-)

"Ricky D" <anonymous@discussions.microsoft.com> wrote in message news:172C1E68-82EE-4FD4-BFF6-9D6164BE5C7B@microsoft.com...
> *I recently used IEREGFIX.EXE and now my browser opens a separate window* for every link I click on. I want the new window to replace the old one so that only one browser window is open on my screen at any one time. (Please note: I am not talking about pop-up windows here, they are a separate problem.) I want to configure my IE6 browser to only open a single window and then replace that window with the new one. I am running XP Pro as my o/s. Please advise how to do this and thank you for your contribution...

Try the programs below and see if they will help:

It is possible you may have parasites, spyware, adware, malware, or hijackware on your system causing the problem. Download and install, you *must* update the programs prior to running to be sure they have the latest definitions, then run the programs below. They are free and very effective. Be sure to run both SpyBot and Adaware, as what one does not detect the other may. It is important that you follow all directions carefully:

SpyBot Search & Destroy: Free

<http://download.com.com/3000-8022-10289035.html?tag=lst-0-2>

or

<http://majorgeeks.com/download2471.html>

AdAware: Free

<http://www.lavasoftusa.com/support/download/>

or

<http://www.majorgeeks.com/downloads31.html>

AdAware Free:

Manual updates: Scroll down to Updates Available –

<http://lavasoft.element5.com/support/download>

microsoft.public.windows.inetexplorer.ie6.browser: Re: IE6 opening separate windows

(Check for Product Updates <http://tinyurl.com/23lv4>)

SpyBot S&D Does not delete some DSO files

<http://forums.net-integration.net/index.php?showtopic=15308>

CWS shredder: Free

<http://tinyurl.com/2l9kl>

or

<http://www.majorgeeks.com/download4086.html>

McAfee Avert Stinger

<http://tinyurl.com/2esu7>

or

<http://vil.nai.com/vil/stinger/>

HiJackThis: – Free

Go to

<http://computercops.biz/downloads-cat-14.html> ,

or

<http://tinyurl.com/2oce8>

or

<http://tinyurl.com/2atxk>

and download HiJackThis. Unzip to a folder other than your Desktop or the Temp folder, doubleclick HiJackThis.exe, and hit "Scan".

When the scan is finished, the "Scan" button will change into a "Save Log" button. Press that, save the log some place you remember where it is. Most of what it lists will be harmless or even required, so DO NOT fix anything yet.

Open a the copy of your log in NotePad and made a copy. Then you can go here to post you log:

<http://forum.aumha.org/>

Go to the HiJackThis section on the forum list and click to open. You can post as a guest. It's also a good site to keep for reference. The experts there will analyze the log and report back the results. Please allow at least a few hours or a days time for a response.

Remember, you must return to the HJT site to get your answer. It is a good idea to click the "Notify" box so that you will get an electronic notification by e-mail to let you know when a response has been posted. But, you must still return to the site of your answer
