I, too, am having this exact same problem. I read in the news that a problem occurred on Tuesday with Akamai's systems – Google, Yahoo! and Microsoft are all affiliated with Akamai. Supposedly, they corrected the problem on their end, but I am still unable to search without it taking absolutely forever.

Did your problems just recently occur as well? Mine was fine one day and then not the next – I'm thinking that Tuesday could've been the day.

Have you found a fix? I've tried everything I know....
