Also, stay away from porn sites. :)

>-----Original Message-----

>Ok I recently aquired a hijacker and some other malware.

>When I use Adaware CWShredder and Spybot they can't seem

>to get rid of it. Maybe I'm missing something. Adaware

>seems to find most of it but when it tries to clear it off

>there is always one dll file that won't leave. I am denied

>access to this file no matter what I try it seems. This

>file is named something new everytime I run adaware. It

>seems to come from a file called "VX2 Better Internet" .

I

>have started my pc up in safe mode as well and tried

>getting rid of the files there but it didn't help. Once

>this thing executes, things start installing on my system

>and I mean alot of things. I rid myself of most of it but

>some of it is other malware as well. Tool bars, desktops,

>favorites and such are all changed and a few other

>programs as well. Also it seems that if you try to change

>your home page it starts executing things. If you try to

>uninstall several of the programs it says I need to be

>online to do so. I assumed this was false and didn't want

>to enlist the help of the people that have given me this

>headache. Some how it has web pages that just open if my

>pc in running and online. Not like a pop-up this actually

>opens my browser and directs me to a webpage that

>its "advanced search methods" assume I'll like, yeah

>right. Anyway I also have hijack this but I don't know

microsoft.public.windows.inetexplorer.ie6.browser: Hijacked

how

>*to read the log file. I've tried all the methods I know*

to

>*get rid of this. Please help.*

>
