Hi! On my server, I installed Trend Micro's Client Server Messaging Suite for SMB. I keep getting a popup window "Your current security settings prohibit running ActiveX controls on this page. As a result, the page may not display correctly."

When I press OK and log in, I get a Trend Micro error message saying without ActiveX installed, the product....

I have set the security settings to Low through the Custom button. What else can I do? Thanks in advance.

We are running version 6.0.3790.0
