Use Regedit.exe and search for NoBrowserOptions and remove it.

It is most likely to be here (but not necessarily)

HKEY\_CURRENT\_USER\Software\Policies\Microsoft\Internet Explorer\Restrictions

If you are unfamiliar with Regedit, then ensure you know how to restore your Registry in case of error and it is a good to export any key before deleting.

Check the startup (Start-Run-MSCONFIG-Startup tab) for any unknown items if it is reset on reboot.

You might try this snippet from Mike Burgess first if you use SpyBot:

'Did you by chance run SpyBot's Immunize feature?

If so, you can unlock by unchecking the option to "Protect IE Control Panel" '

...Alan
