For some reason my kids PC showed a list of downloaded MP3s in text when trying to access Symantec.com. I saved those as a text file and removed the temp files etc but now I just get the website unavailabl error when I try to get in again. Can get into Norton.com but once I choose a menu item – it redirects through Symantec.com and I get the same message. Its a bit of a problem because now that PC is open to viruses and we can't register/up-date. Any suggestions anyone?
