Question: My CTRL+ENTER keys (which adds www.???.com to a word in the address bar stopped working.

How do I get back this functionality?

Run RegEdit and naviage to this key.

Be careful with this tool.

Solution:

```
[HKEY_CURRENT_USER\Software\Microsoft\Windows\CurrentVersion\Explorer\AutoComplete]
```

```
"Append Completion"="no"
```

```
"Use AutoComplete"="yes"
```

```
"AutoSuggest"="no"
```

Changing "Append Completion" from "no" to "yes" will restore the function.
