Try IE Options>Content Tab>autocomplete>un-check all three boxes> clear all forms and passwords. Although the advanced tab of IE Options has similar options (use inline autocomplete for...) they are subservient to the content tab IIRC. Anyway, you can uncheck those as well.

Also, R-Click Taskbar>properties>Start menu programs>clear documents menu.

You might also want to clear history if you don't want any other Typed Urls showing in the Address bar, and in the future use Ctrl-o (letter "o") and ctrl-enter or OK. Then they won't be added to the address bar dropdown list.
