Hi Pierre :-)

> *Since I installed the service pack 2 I keep getting the
> Information Bar with my home page that is setting on my
> hard drive. I don't have any problems when I view the
> online version since the domain is part of the trusted
> sites. How do I include the hard drive version of my home
> page in the trusted sites?*

>
Try the following and see if it helps:

Register these files:

1. Click on Start -- Run
2. Type Regsvr32 softpub.dll
3. Click OK

and.....

Script Debugging Problem

Open IE

Tools | Advanced

Under Browings:

Disable Script Debugging – Check it

Display a notification about every script error – Uncheck it

Apply

OK

or.....

Problems accessing secure sites/cannot install 128 bit encryption

or.....

Problems with secure sites – Courtesy of Robert Aldwinckle

Re: trusted sites

Try turning on prompts for Cookies and Active Scripting so you can tell if anything is happening. You could also open the TIF viewer and see if you already received it. Make your view Details and order by Last Accessed. The Cookie appears as a txt file. There is also a request to use ActiveX which I couldn't see where it was being used but there is a script which checks whether the browser can handle Shockwave Flash so I suspect there may be check for it which I missed somewhere.

The point is that all of that gets done before the page starts being rendered; so either your User-Agent string or your version of Flash may be affecting what else is being loaded and it may be that which is causing the 404.

If you don't want to bother with prompting you would also get a different result simply by using the Security tab slider and setting it to High.

Don't forget to set your security settings back to whatever they were (e.g. click Default) after testing. ;)

or

Flash & Shockwave not working

A few of things could contribute to the problem. Have you checked your firewall to see if the ad-blocker or Flash blocker is set to on or block? Also, there are several Pop-up blockers that will block Flash unless you turn it off. I had POP-UP Blocker and it would not open Flash at all, and it took me a while to figure out what was doing it When I unchecked the Kill Flash it stopped. Some Flash has pop-ups and the blockers will see them as ads or and kill it any way.

Also, if you have SpywareBlaster installed, be sure you have Kill Flash unchecked – Open SpywareBlaster – Tools – Click on Flash Killer then uncheck "Switch off Flash Player" or in v3.1 Disable and block Macromedia Flash (4X 5X & 6X) in Internet Explorer.

<http://www.mvps.org/inetexplorer/answers2.htm#hyperlinks>
http://www.mvps.org/inetexplorer/answers.htm#new_window

or.....

You can try updating your scripting engine. The latest scripting engine can be found at:

<http://msdn.microsoft.com/library/default.asp?url=/downloads/list/webdev.asp>

(98, ME, NT4.0) For 2000 and XP go to

<http://www.microsoft.com/downloads/details.aspx?FamilyID=c717d943-7e4b-4622-86eb-95a22b832caa&DisplayL>

Java VM:

http://www.mvps.org/inetexplorer/answers_9.htm#java2

Sun version

<http://java.sun.com/getjava/installer.html>

MSJVM Transition FAQ

<http://www.microsoft.com/mscorp/java/faq.asp>

Also....

Courtesy of Jim Byrd:

There is good information concerning all aspects of the Java situation here:

<http://www.javatester.org/installing.html>

Be aware, however, that after Dec 31, 2007, MS will apparently no longer be distributing Java or providing any support for Java including security fixes. See here:

<http://www.microsoft.com/mscorp/java/>

so you might want to start thinking about the future.

You can get the Sun Java J2SE RunTimes or SDK here:

<http://java.sun.com/downloads/index.html>

(all versions – select using the dropdown)

Sun also offers an automatic download and install of the 1.4 Java plug-in here:

<http://java.sun.com/getjava/download.html>

For the MS Java VM, you may need to install v.3805 or v.3809 prior to upgrading to v. 3810 if you didn't previous have MS Java v. 3805 or 3809 installed.

Download and install the MS Java VM v. 3809 from one of the links here:

<http://ftp.idilis.ro/windows/sp/jvm98/msjavwu.exe>, or here:

<http://secinfo.huji.ac.il/patches/Win-xp/msjavwu.exe>

Then upgrade to v. 3810:

Re: trusted sites

microsoft.public.windows.inetexplorer.ie6.browser: Re: trusted sites

For all OS's except Win2kSP4 obtain v. 3810 here:

<http://fileforum.betanews.com/detail.php3?fid=1050022631> ,or here:

http://download.windowsupdate.com/msdownload/update/v3-19990518/cabpool/MSJavWU_8073687b82d41db93f4c

Both Java VM's can co-exist on your machine quite nicely. Just select which one you want to use in Tools|Internet Options|Advanced and restart all IE browsers. Here, courtesy of Michel Gallant, MVP Security, is a tiny utility which allows you to toggle and view status of your current Java VM vendor associated with IE:

<http://www.jensign.com/JavaScience/SelectIEJVM/index.html>

A note from Mitch Gallant:

"One note about the JVM Selector utility: If/when you install a new version of Sun J2SE, you need to manually select to have Sun JVM as default JVM for IE (in install), or after install via the JavaPlugin control panel. This generates the necessary win32 registry entries, which must be present for the utility to know about JavaPlugin. After that, the utility should work properly."

MSJVM Transition FAQ

<http://www.microsoft.com/mscorp/java/faq.asp>

or.....

Do you have the JavaScript plug-in installed?

<http://java.sun.com/webapps/download/AutoDL?BundleId=9567>

or.....

You might also try installing the Windows Script 5.6 for Windows 2000 and XP if you have not already done so. The install includes a new jscript.dll

<http://www.microsoft.com/downloads/details.aspx?FamilyId=C717D943-7E4B-4622-86EB-95A22B832CAA&disp>

or.....

1. You might want to refresh your scripting engine:

<http://msdn.microsoft.com/library/default.asp?url=/nhp/default.asp?contentid=28001169>

or

<http://msdn.microsoft.com/library/default.asp?url=/downloads/list/webdev.asp>

Sometimes there's a corrupt file in the cache and one must go to Tools | Internet Options and click Delete Files.

2a. Start>Run>Regsvr32 vbscript.dll

2b. Start>Run>Regsvr32 jscript.dll

(WinXP users who have problems with 2a and 2b, see

http://www.mvps.org/inetexplorer/answers_9.htm)

Re: trusted sites

3. Re-register all DLLs listed in <http://support.microsoft.com/?kbid=281679>

4. See also

Error Message When You Browse the Web: An Error Has Occurred in the Script on This Page

<http://support.microsoft.com/?kbid=306831>

Scripting Errors When You View Web Pages in Internet Explorer after Installing Office 2003

<http://support.microsoft.com/?kbid=822521>

5. IE Tools>Internet Options>Advanced>Browsing>Enable third-party browser extensions (uncheck & reboot).

also.....

It may, however, be Shockwave Flash related, try the following:

There is a FAQ about the SWF plugin there.
