If you are having problems after removing Spyware....

<http://www.cexx.org/lspfix.htm>

This utility should be used if, after removing spyware/malware, you are no longer able to connect to the internet.

If LSPFix doesn't help, winsockxpfix might (Windows XP only):

<http://www.spychecker.com/program/winsockxpfix.html>

\*\*Note, if you are using XP SP2 the following command, run from start/run, may get your computer going again – it will reset the winsock catalogue:  
netsh winsock reset
