Frank,

Just noticed that Yahoo had been intalled in my programs when I went in to check and remove unneeded programs. Evidently Yahoo got installed at some point a few days ago. As far as I know I did not authorize the addition and I guess it was not caught by McAfee.

Anyway – IE works fine now, multiple processes, and I can include my Google toolbar on the IE screen again as I was until a few days ago.

The Enable Third Party Extensions box is checked and everything works fine again.

Appreciate your help – next time a browser problem occurs – I will be sure to check for unauthorized programs being installed without my knowledge.

Thanks.

Don Richardson
