I can't get IE 6 to open. I've had it on my daughter's pc for a year and all of a sudden, it won't open. She uses Netzero dialup. I've uninstalled and reinstalled NZ, IE 5.5, IE 6, ran spy bot, regseeker and others but it still won't open, whether or not she's online. When I hit ctrl/alt/delete, it shows iexplore but it doesn't show up. Can anyone give me any advice?

thx  
.
