I have a website where I have installed an asp script to show a banner ad on the page. When I go to the website, I cannot see the banner ad on my screen (my OS is XP – Home and the IE is version 6.0.2900.2180 with SP2 update).

I have another computer at home with NT 2000 on it and can see the banner ads clearly on that one. The IE version on that machine is 6.02800.1106.

Is there a setting on my IE that is not allowing me to see these ads?

An example of the script on the page:

```
<!----- ASPBanner Ad code ----->
```

```
<script language="JavaScript">
```

```
<!--
```

```
function SymError()
```

```
{  
  return true;  
}
```

```
window.onerror = SymError;
```

```
var SymRealWinOpen = window.open;
```

```
function SymWinOpen(url, name, attributes)
```

```
{  
  return (new Object());  
}
```

```
window.open = SymWinOpen;
```

```
//-->
```

```
</script>
```

```
<script language="JavaScript"> var code = ";
```

Can't see scripts on page.

Can't see scripts on page.

```
var now = new Date();
var nIndex = now.getTime();
document.write('<s' + 'cript
src="/aspbanner/aspbanner/injectbanner.asp?BannerZone=1&nocache=' + nIndex +
">');
document.write('</' + 's' + 'cript>');
</script>
<script language="JavaScript">document.write(jscode);</script>
<!------- End ASPBanner Ad code ----->
```
