Hi,

Some possibilities:

Go to Internet Options> Security> Internet Zone, set it to Default.

Clear the IE cache. IE> Tools> Internet Options> General> Delete files (and delete offline content when that dialog pops up) It's often recommended that the TIF folder be kept at about 50 MB (Settings.)

Disable (as a test) any third-party security programs to see if one of them is blocking scripts, scripting, active content. Norton Internet Security? McAfee AV- Internet Filter?

Are you having trouble with scripts/scripting on other pages?

Try these two commands from Start> Run> cmd [enter]

regsvr32 vbscript.dll [enter]

regsvr32 jscript.dll [enter]

Reinstall the scripting engine. Go to

<http://msdn.microsoft.com/library/default.asp?url=/downloads/list/webdev.asp>

for the appropriate download of Windows Script 5.6

Hope this helps,

Don
