-

I have a website and I want to add some pages, but have only those new pages password protected.

I have been told and seen that I can do this with IE6.

I did read the contact advisor---

<http://support.microsoft.com/default.aspx?scid=267930> ---- however I don't know if this works for my needs.

?? Can you tell me if following the above instructions will password protect a portion of my website.

?? I am using frontpage 2002, should I save this noaccess.rat file somewhere in my web folders? If so, where?

Click here for an example of what I am trying to achieve.

<http://www.donnabayes.com/id478.htm> --- Then click--'click here'. A Explorer User prompt pops up, requesting a password.

Can you direct me to how I can set this up, by my website?

Thanks sooooo much in advance!
