Did you get that control from here?

http://www.axis.com/products/camera_servers/AxisCamControl.ocx

If so, or you already have it on your system, find the file, right click on it and choose Properties. On the General tab, click the "Unblock" button.

tried that earlier, but no luck. even in a trusted zone IE won't allow the activex component to load because the certificate/signature is missing.

.
