Hi,

Try these steps, in order.

Check any third-party security programs, ad-blockers, etc. to see if one of them is blocking scripts, scripting, active content. Norton Internet Security and a number of other programs can be configured to block scripts. Go to Internet Options> Security> Internet Zone, set it to Default.

Try the Internet Options> Security settings at <http://mvps.org/winhelp2002/restricted.htm#Setting>

Clear the IE cache. IE> Tools> Internet Options> General> Delete files (and delete offline content when that dialog pops up) It's often recommended that the TIF folder be kept at about 50 MB (Settings.)

Try these two commands from Start> Run> cmd [enter]
regsvr32 vbscript.dll [enter]
regsvr32 jscript.dll [enter]

Reinstall the scripting engine. Go to <http://msdn.microsoft.com/library/default.asp?url=/downloads/list/webdev.asp> for the appropriate download of Windows Script 5.6

Re-registering the DLLs listed in this article may help:
281679 – You Cannot Open New Internet Explorer Window or Nothing Happens After You Click a Link: <http://support.microsoft.com/?kbid=281679>

Hope this helps,
Don
