- 

IE has stopped to install ActiveX Objects. When I go to a website that uses an ActiveX-Object (e.g. Microsoft Update) I get the Informationbar telling me about the ActiveX-Object. When I click "Install ActiveX Object" in the context menu a Messagebox with a security warning is displayed where I click "Install". Then nothing happens and the ActiveX object is not installed. I could install the Flash-ActiveX object by downloading the standalone installer so it cannot be an issue with user rights (I'm doing this with admin privileges). This is on WinXP SP2 (all updates installed).

.
