-

I recently remove and old ISP program from computer and all of sudden i lost my IE and everytime i go and try to open it up, the page comes up page could not be displayed. Also says at top of page can not find server. And at the bottom it says DNS Error. I am using Windows Xp Professional and have the SP2 service pack loaded. Have contacted Microsoft numerous times and tried tons of things to repair it, but nothing happens, or i get transferred all over the place instead of telling me where and how to ReDownload IE into my computer. Have also tried the manufacturer and they have told me there is no CD to download IE into your computer, since my computer is out of warranty, it would cost over \$125.00 to talk to a technician to try and fix it thru them. So Does anybody in here have any suggestions on how to fix this or solve this.

Thanks lyks2playe

help with IE downloading
