My computer is only 4 mos old and I have continually had a problem with IE6 crashing. It shows it's still running but I can't close it out unless I use Control/Alt/Delete. Then i get a message that it's either spyware, IE add-ons, or a virus causing the problem OR a message that the error was likely caused by: IBIS Toolbar and to remove it. I have NAV5, Spybot S&D which run and show no virus, adware or spyware. I also tried to see if the IBIS Toolbar was on my machine and it isn't.....so can't delete what isn't there.

I also thought the problem might be with Sun's JAVA JVM2 but they assure me everything is running properly.

This problem only happens when I'm in Yahoo Games and playing Canasta. Any other games work and close out fine. The actual Canasta room closes out but then when I try to close out IE it locks up. I have also contacted Yahoo and they tell me it is an IE problem. I am on Microsoft XP, SP2, IE6 Version 6.0.2900.2180.xpsp_sp2.

Also, the IE Error I keep getting is: szAppName: IEXPLORE.EXE szAppVer: 6.0.2900.2180
szModVer: 0.0.0.0 offsets: 00000000 szModName: hungapp

The Error Report Content is:

C:\DOCUME~1\Owner\Locals~1\Temp\WER21eb.dir00\IEPLORE.EXE.mdmp
C:\DOCUME~1\Owner\Locals~1\Temp\WER21eb.dir00\appcompat.txt

Any ideas or help would really be appreciated. I am retired and enjoy playing Canasta online but this problem is very annoying especially since my system is new. I had no problems while on Windows 98 with IE6.

Shebu
