In addition to Robear's suggestions - if your system comes up clean - it could be your Favorites folder for that account is damaged/corrupted: <http://inetexplorer.mvps.org/archive/answers3.htm#favorites>

I have a machine that is running XP sp2 and IE 6.0.2900
My problem is that everytime a user tries to create a bookmark IE crashes.
This is not user specific. I have only bare essential third party programs running on this machine.
McAfee Enterprise 8.0
AdAware 1.06
MS Office XP
All service packs and updates are in place.
I would appreciate anyones ideas on this trouble.

Thanks
