Hi Frank- Your suggestion worked & I was able to delete the temp files & offline content. The size was 128MB, which I changed to 50. But ... when trying to launch IE, it continues to freeze up. There's an error message relating to WS2_32.dll. Do you think it would be ok to try & dump IE & re-install? Thanks again for all your help.
-h

What is the exact error message?

Did you update to SP2 or did the computer come with SP2?
