Thanks for the help. I do not have a restore point. As far as trying to uninstall, I only unchecked Internet Explorer in the Windows Components of the Add\Remove Programs (I can't imagine MS would allow this, if it created problems with XP).

The sfc command yielded now improvement. This is my laptop, but I'm not sure why I should request the XP CD...to allow the chance to run a repair?

It's a strange problem. Some sites, it won't open. Others open fine...but for hotmail...I can't type in the login area...and I can get into Yahoo, but can't type into the login area. The biggest issue is that my Turbo Tax fails to install the State version, since it's failing to launch IE. And the fact that the version does not show is bizarre. Any further ideas would be greatly appreciated. I scanned the hard-drive for errors, scan regularly with Antivirus and Spyware. It's hard to believe this is so difficult to repair. Thx. for the help.
