Hi Cathlene :-)

With the recent IE7 Public Preview Beta 2 release, it is possible that some webmasters may be tinkering/testing with webpages to see if they can make necessary adjustments to them in anticipation of the final IE7 release. If so, then the website will likely present a few such problems for those using IE6, and maybe even IE7. But, I would consider that we may see some such issues here and there as a result. Just a thought. :-)

Thanks Jan for your input. I appreciate your help. I was thinking that some how, some where....I'd done something. I am really computer literate but this did have me baffled and I didn't know where "I'd" gone wrong. I'll just hope somehow, this all will fix itself and work the way it used to.

Cathlene

Hi Cathlene :-)

As a test just went to the link you provided and it is changing the Encoding setting Unicode (UTF-8) that I normally use to the Western (ISO) as well. After going to another webpage and resetting my Encoding back to Unicode (UTF-8), closing IE, opening it to my homepage, my Encoding

Re: IE 6 sp2 – encoding problem

settings
is unchanged. I click on your link and encoding is immediately changed
to
the Western (ISO) and will not allow me to change it back to my own
setting.

Thus, unless this is happening with all the websites that you are
visiting,
it does not appear to be a problem on your end, but, may be the settings
on
that webpage. At least, that is how it is working for me here.

Hope this helps.

Jan :)
