Sorry, I left town for a few days (nothing illicit).

I am running 1.3.0_4 on one unit, 1.4.0_6 on another, and 1.5.0_6 on two other units, all with the same problem, the hang up of IE6 when accessing certain websites. Other website work fine.

I also have other units on the same network using each of those versions of JRT and have no problem.

Hi,

What version of Java are you running? I removed the latest Java (5_6) and I have not had the problem in a couple of days. I had read that there were some problems with it. I am still monitoring it to see if it occurs, and will let you know.

Yes, I can ping Yahoo, Dell, and some others. I don't get responses from MSN, Microsoft, HP, and McAfee. Of course those are the ones I want.

Seems

like something is blocking contact with some internet sites but not all.

Is

this the firewall that is doing this? How did it decide to select the sites

I use most often?

I have also opened windows in the safe mode and disabled the add-ons I don't

recognize. Didn't help. Should I try to shut them all down?

Re: IE6 Hangs

I am having the same problem. I usually get "page not found" after it sits for a while trying to download the webpage. All other network connections are fine, and is it just the communications in IE and Outlook stops as well (server not found errors). Can you drop to a command window and ping yahoo.com successfully. I find that I can, and that the problem is just within IE and outlook.

I am having the same problems. I will continue to research the problem and will keep you posted if I find anything helpful.

I have 4 computers on my home network, 1 running Win XP Home SP2, 1 running Win XP Pro SP2, and two running Win XP Entertainment Center, and all protected with MS firewall and Norton or McAfee antivirus, that started hanging. The remaining 5 computers run OK. There is no problem connecting to other computers on the network, and on two of the computers there is access to other internet sites other than MS. I cannot download updates

Re: IE6 Hangs

to
Windows of McAfee but I
can download updates to
Norton AV 2005. On
some
of
the computers IE says
website found, but never
loads it, and others
partially
load MSN.com but won't
complete the task and then
hang.

I have installed Netscape to
see if IE 6 was flawed but it
did the
same
thing.

Other computers on the
network are configured the
same and do not have
the
problem.
Any advice?
