I'm beginning a corporate intranet site, and I use Firefox / Opera as my default development platforms, but when I tested the demo pages in Internet Explorer, nothing at all renders.

Site URL: <http://www.aboring.com:81/payroll/?module=piecework>

Validates XHTML 1.0 / Transitional

Doc-type text/html

Works perfectly in Firefox, renders but scripts broken in Opera

(Oh, and please don't tease about the cruftyness, I've only spent about 25 minutes on it so far)
