HOW TO: Troubleshoot Situations Where You Cannot Complete MSN Sign-up or Connect to SSL Secured (128-Bit) Web Sites by Using Internet Explorer in Windows XP
<http://support.microsoft.com/?kbid=813444>

"The Page Cannot Be Displayed" Error Message on a Secure Web Site
<http://support.microsoft.com/?kbid=303807>

More help here: <http://inetexplorer.mvps.org/answers/17.html>

Also, check your ZA settings – some of it's "privacy" settings may be blocking the transmission of info needed to log on to secure sites.

I have recently developed a problem where I can access a website, like ebay, but when I try and login in I am confronted with a Page cannot be displayed error.

Similarly I cannot log in using MSN Messenger.

It would seem whenever I have to pass information like my log in I have problems.

I have checked the connection settings and all seems ok. I am using my machine via a belkin router, as fixed machine. The machine is protected by ZoneAlarm Suite.

A second laptop seems fine via the wireless connection.

Any ideas would be welcomed please.

Dave
